# HIGH - PERFORMANCE

MADE IN GERMANY

## ELECTRONIC SPRAY

INSULATOR / PROTECTOR FOR ELECTRICAL INSTALLATIONS.

Electronic Sprays excellent creep characteristic ensures displacement of moisture from electrical cables, connectors and contacts. Forms a micro-thin film and protects electrical connectors against moisture. Cleans contacts, removes contaminations and dissolves encrusted layers. Acts as a preserver and prevents electrical creep. Reduces voltage drop. Ensures electrical connections are functionally secure. Reduces wear and disperses moisture. Does not harm paintwork, plastic or rubber parts. For maintenance and care of electrical equipment and components, such as push or snap connectors, lamps, fuses, distributor caps, circuit breakers, switches, battery terminals, alternators, starter motors etc. Also suitable for the lubrication of precision engineered parts such as door mechanisms, car-jacks, slide-ways and Bowden cables.

### BENEFITS:

- ✓ Penetrates and displaces moisture in cables, connectors, and electrical contacts.
- ✓ Cleans dirt and dissolves old scale/encrustations.
- ✓ Prevents current leakage and voltage drops.

APPLICATION AREA	CONSUMPTION	TREATMENT TIME
For maintenance and care of various electronic equipment, devices and even fine mechanical components.	Approx. 5-10 depending on the application.	While engine is running.

APPLICATION NODES
Spray the product evenly onto the parts being treated from a distance of approx. 30 cm and allow it to penetrate. If necessary, remove dissolved contaminants and treat the surface again.
