

WEAR & FRICTION PROTECTION

MADE IN
GERMANY

NANO ENGINE SUPER PROTECTION

HIGH-TECH WEAR PROTECTION RECOMMENDED FOR ALL DIESEL AND GASOLINE ENGINES.

Nano Engine Super Protection creates a highly active nano barrier in the oil which protects all the internal surfaces of engines and equipment such as oil system, manual gearboxes and differentials. Seals, o-rings and shaft seals are kept supple. Improved oil flow during cold start, smoother and quieter engine running, improved performance, extended life of equipment, and excellent "run dry" emergency properties.

BENEFITS:

- ✓ Creates an anti-friction barrier with Nanotechnology.
- ✓ Reduces internal engine friction and wear by up to 96%.
- ✓ Revitalizes seals and gaskets.
- ✓ Improves cold starts.

| APPLICATION AREA | CONSUMPTION | TREATMENT TIME |
|---|---|--------------------------|
| Service product for use in the oil system of 4-stroke petrol and diesel engines. Applicable for common rail as well as pump injector fuel systems and recommended for engines with turbo charger, catalytic converter and DPF filters. Compatible with all engine oils. | 10.1 oz sufficient for 5 liters of oil. Mixing ratio: | While engine is running. |

APPLICATION NODES

Add to oil system after each oil change. We recommend cleaning the oil system with Oil System Cleaner before use. Observe the maximum oil quantity! In power-steering systems, manual transmissions and differentials use at ratio 1:10.

NOTE: When using in vehicles with wet clutch, observe the manufacturer's instructions!

Content: 10.1 fl.oz

Units per case: 24 pieces.

Art.No. 33181BC

BEFORE using nano engine protector:
High friction and wear

During application, the Nano Engine Protector forms a highly efficient nano anti-friction barrier within the oil.
