

RADIATOR FLUSH

Limpiador de Radiador

HIGH-PERFORMANCE COOLING SYSTEM CLEANER.

Radiator Flush removes operational deposits in the entire cooling system. It also removes lime and fur deposits, protects against rust and corrosion, dissolves dangerous radiator sludge and cleans water coolers, boilers and heat exchangers. The product makes valves, thermostats and water pumps free again. The use of Radiator Flush increases the reliability and lifetime of the engine. Also the heating and cooling performance will be improved.

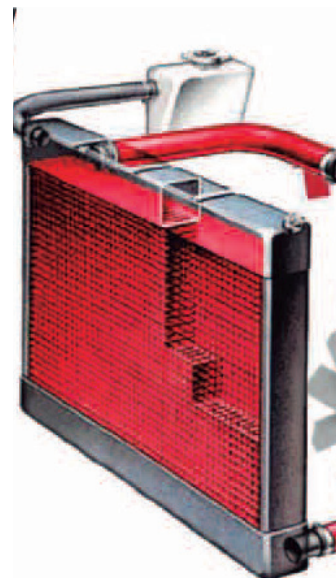

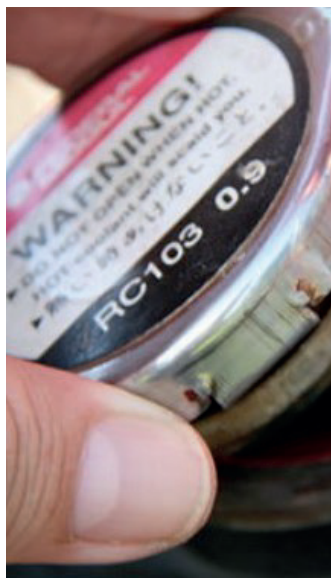

BENEFITS:

- ✓ Effectively cleans rust, sludge, and scale from the entire cooling system.
- ✓ Effectively lubricates the pump, valves, and thermostat.
- ✓ Improves radiator performance.

APPLICATION AREA	CONSUMPTION	TREATMENT TIME
For use in all cooling water circuits of petrol and diesel engines or industrial equipment.	10.1 oz sufficient to treat cooling systems of 4 – 8 liters capacity.	15-40 minutes, depending on the size of the system.

APPLICATION NODES

Add the product to the coolant. Start the engine and open the heating valve, run engine for 10-15 min. Drain system completely and flush with fresh water. Refill the system with coolant in line with manufacturer's instructions. We further recommend adding bluechem Radiator Conditioner.
